

Autumn 2016

Dear Colleague,

On Friday **March 11, 2016**, the **XIV Annual Meeting of the Scientific Society "Spanish Group of Cornea and Ocular Surface" (GESOC)** will take place in Madrid.

This year we have the privilege and the challenge of coordinating the symposium on: **"UPDATE in KERATOCONUS"**, which is a hot a topic that we are constantly re-evaluating.

To this end, we have invited speakers of great prestige, both nationally and internationally. They have dedicated and devoted much of their professional lives to research, diagnosis and treatment of corneal diseases.

Due to constant technological advances in diagnosis and treatment of this disease, we consider that presentations have to be as didactic and practical as possible with clear messages that generate debate among the various speakers and attendees in the room.

Key items on the different round tables are:

- The problem of ectatic cornea
- Consequences of loss of stability of the cornea
- Can we stop the problem?
- New advances to improve vision contact lenses of special geometry, corneal cross-linking, intracorneal ring segments, corneal transplants....

We invite you to save the date in your diary and attach the agenda of the meeting.

We look forward to your presence, hope that chosen topic is of interest to you.

Yours Sincerely,

A handwritten signature in blue ink, appearing to read "Nicolás".
